

# Entrepreneur & Invention Summer Camps

Part of the Lake Michigan College Bertrand Crossing Campus 2010 Summer Camp Series

Have **you** ever dreamed of  
creating something...  
anything...  
*your very own original  
invention?*

**Well, your dreams can come true! Now you have the power and technology to make and market anything!**

Each morning, you will learn what it takes to turn an idea into a profitable product. Through real-life, application-based approach to entrepreneurship, you will learn about business plans, marketing and managing money, and cash flow in a fun and exciting way (The morning session is offered in partnership with Junior Achievement of Michiana).

Then, you'll get to "make it happen" by spending each afternoon in the **Lake Michigan College FAB LAB (Fabrication Laboratory)**, a personal fabrication lab where anyone can make just about anything. This class is based on the **principles of the FAB LAB developed by Dr. Neil Gershenfeld at the Center for Bits and Atom at MIT**, which aims to bring invention and design to the everyday environment.

- This middle school level class is intended for students entering grades 6-9 in the fall (ages 10-15).
- Students will have a partner for most activities and are expected to cooperate well.
- Each day includes structured lessons and activities to practice entrepreneurship and fabrication skills.
- No previous experience is required, although returning fablabbers are welcome.
- Students need to bring their own sack lunch, and be motivated and mature enough to succeed in a busy day's worth of activities.

---
